

Streamline Signage makes it simple to create a series of custom signs which will then be converted to a retail product for future purchasing.

Below lists the steps to completion:

1. Discuss project and online ordering options in detail, then Streamline Signage will produce a production quote per sign type
 2. Quote and agreement will be sent to you for review and approval
 3. Once approved, our team will assist to finalize design (per item) of your sign series and we will create your company's online My  Account
 4. Once we have art files, we will create preliminary color proofs (per item) to confirm color guides and preferences
 5. After proofs have been made, all we will need is a signed Approval Form before final production will start
 6. The items will then be uploaded to your company account and will be ready for purchase as a Retail Item
 7. Login and you can Add/Delete Items, create Packages and upload your graphics accordingly
- ❖ If installation is needed, we will confirm details while creating your account and add information in the User Account checkout. We will confirm general time frame needs, which will depend on sign type and location of installation.
